

Magma Releases ExpressBox⁴ External PCI Express® for Desktops and Laptops

San Diego, CA - June 24th 2008 -

Magma is pleased to announce the availability of [ExpressBox4](#), an external PCI Express expansion product for desktop and laptop computers. ExpressBox⁴ provides an fast and easy solution for attaching up to four PCI Express cards to a desktop or server through a x8 PCI Express or to a laptop through the ExpressCard slot now appearing on most new PC desktop/servers/ laptops.

Cost Effective Solution for Expanding I/O Capacity

Magma ExpressBox4 is a PCI Express Expansion chassis system that provides a simple, cost-effective solution for expanding the available PCI Express slots of workstations, servers and laptops. This allows for significant cost savings to organizations since it eliminates the need to invest in new computer hardware in order to be able to accommodate the growing need for I/O expandability.

Optimal Setup for Enhancing PCI Express I/O Capabilities

ExpressBox4 expansion solution provides 4 full-length PCI Express slots. This is a stand alone chassis in an industry standard enclosure with its own power supply. As an option, the PCI Express slots are equipped to be hot swappable. This chassis allows the flexibility to seamlessly expand I/O capabilities of servers and workstations utilizing the built-in transparency of PCI Express architecture.

Easy Installation

Expressbox⁴ consists of a Host Card (PCI Express or ExpressCard, a 1-meter (3-meter option) cable and a chassis (including a 400W power supply). Magma Expressbox⁴ is automatically configured by the System BIOS making all of the slots appear transparent to the host computer.

Order Today! We will be able to ship within 5 business days after receipt of order.
